

Features

Multi-function and multi-voltage timer

- One module 17.5 mm wide housing
- Seven functions (4 with supply start and 3 with signal start)
- Six time ranges from 0.1s to 10h
- 35 mm rail (EN 60715) mounting

81.01
Screw terminal

NEW 81.01

- Multi-voltage (DC non polarized)
- Multi-function
- 35 mm rail (EN 60715) mounting

- AI:** ON delay
DI: ON pulse
SW: Symmetrical recycling: ON start
SP: Symmetrical recycling: OFF start
BE: Signal OFF delay
DE: Signal ON pulse
EE: Signal OFF pulse

Supply Start = Start via contact in supply line (A1).
 Signal Start = Start via contact into control terminal (B1).

Wiring diagram

Supply START

(AI) ON delay.
 Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.

(DI) ON pulse.
 Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.

(SW) Symmetrical recycling: ON start.
 Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ratio is 1:1 (time on = time off).

(SP) Symmetrical recycling: OFF start.
 Apply power to timer. First transfer of contact occurs after preset time has elapsed. The timer now cycles between OFF and ON as long as power is applied. The ratio is 1:1 (time on = time off).

Signal START

(BE) Signal OFF delay.
 Power is permanently applied to the timer. The output contacts transfer immediately on closure of the Signal Switch (S). Opening the Signal Switch initiates the preset delay, after which time the output contacts reset.

(DE) Signal ON pulse.
 Power is permanently applied to the timer. On momentary or maintained closure of Signal Switch (S), the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.

(EE) Signal OFF pulse.
 Power is permanently applied to the timer. On opening of the Signal Switch (S) the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.

RESET function (R)

For each and every function and time range, the timer is immediately reset when the reset switch is closed.

Example:
 Supply START; ON delay function
Closing the external reset switch immediately resets the timer. Opening the reset switch re-initiates the timing function.

Example:
 Signal START; ON pulse function.
Closing the external reset switch terminates the interval time and resets the timer. To re-start, it is necessary to open the reset switch, before closing the signal START contact.
